Business Backup

Don't let data loss cripple your business.

Business Backup protects your valuable business data with a fully automated backup service. Your data is encrypted and safely stored off-site in our secure data centre.

You can easily restore your data if you experience a disaster such as a server crash, virus infection, fire, burglary or accidental deletion.

- 100GB disk space (expandable)
- Automated and Incremental
- Restore files and folders
- Windows XP?Vista/7
- Windows Server 2000/2003/2008
- Mac OS X 10.4.10 (Tiger) and Mac OS X 10.5.0 (Leopard) and higher
- RedHat, SuSE and Debian

Easily backup and restore critical files.

Deploy

Install the Business Backup client on your office and home computers. All data is backed up to a single Business Backup acount for easy management.

Protect

Choose which files and directories to backup and create a schedule. Your backups happen automatically and reliably.

Recover

Quickly recover all your files or, just the ones you need. If you accidentally deleted a document, or want to view an older version, restore it with Business Backup.

Overview

What can I backup?

- Email
- MYOB
- Quickbooks
- Word documents
- Accounting and billing archives
- Legal compliance documentation

Easily backup and restore critical files

Business Backup protects your valuable business data with a fully automated backup service. Your data is encrypted and safely stored off-site in our secure data centre. You can easily restore your data if you experience a disaster such as a server crash, virus infection, fire, burglary or accidental deletion.

Offsite Australian backup

With Business Backup, your data is sent directly to a secure external location (our Australian datacentre). This eliminates dangers like theft and fire, which do affect local (tape, disk) backups.

Your data is 100% private and secure

Business Backup uses stringent security techniques to ensure that backup data is 100% private and not accessible to anyone but you. Business Backup offers AES 256-bits encryption with a private key and transmission over SSL.

Peace of mind

Business Backup is 'set and forget' software. Once configured, it works automatically and sends you emails with status updates, saving you both time and money.

Easily restore your files

Restoring your data is fast and easy. Simply select the backed-up data and choose the target location, and your files and folders will be back on your computer in no time.

Anywhere, anytime access

Access your backups on the go via a web browser on any internet connected device (PC, laptop, mobile, tablet). In the event of a computer crash, you will still be able to access your backups using a web browser.

Multi-platform backups

The Business Backup client software supports backups of Windows, Mac and Linux machines.

Incremental backups

Business Backup can keep a history of your file changes (depending on your retention preferences). Changed files are stored as a new version, allowing you to go back weeks in time to restore the desired version.

High availability

With Business Backup your data is continuously and directly available. When you lose data, you can retrieve it immediately with a simple restore.

Added redundancy

We keep copies of your data on separate storage systems to add an extra layer of redundancy to your backup solution.

Eliminates human error

If you currently back up manually (eg. using external hard drives in rotation while keeping one off site) the hassle and time involved could mean that backups don't happen as often as they should. Business Backup automatically backs up your data offsite, mitigating the risk of human error.

Technical Information

Plans and Disk Space

Disk Space	100 GB up to 1000 GB (available in 100 GB increments)
Disk space upgrade	✓ Upgrade at anytime through the control panel

Standard Features

Specifications	
Security / encryption	✓ AES 256-bits encryption with a private key and transmission over SSL
Automated backup	✓
Incremental backup	✓
Multiple file versions	✓
Restore files and folders	✓
Backup reports	✓
System state backup	✓

Support Operating Systems	
Windows	Windows XP/Vista/7 and Windows Server 2000/2003/2008
Mac OS X	Mac OS X 10.4.10 (Tiger) and higher and Mac OSX 10.5.0 (Leopard) and higher
Linux	RedHat, SuSE and Debian
